

This AGBRIDGE™ Data Services and Subscriptions Data Policy explains how Customer data, as defined in Scruggs' AGBRIDGE™ Subscription Contract ("**Contract**"), is collected, used, and protected by Scruggs Equipment Company, Inc. ("**Scruggs**")

Data Ownership

Customer data is the property of the Customer that legally owns the equipment from which the data was generated. To further clarify, data generated and stored within a Customer's "machine folder" on the AGBRIDGE™ Cloud Server ("**Server**") is the sole property of that Customer, whether that Customer paid Scruggs directly for their AGBRIDGE™ Subscription Contract or payment was made to or by an Authorized Adviser as defined in the Contract.

Collection of Customer Data

All data collected using AGBRIDGE™ Services ("**Services**") is done so at the sole discretion of the Customer through interaction with the field computer installed on each machine from which the data originates. Only data selected by the Customer is stored on the Server and synced with computers as directed by the Customer's Account. Wireless transport of data requires the data to first be downloaded from a machine's field computer to an AGBRIDGE™ Drive ("**Drive**") where the data will remain until the Customer decides to delete the contents of the Drive. Wireless transport of data that is resident on a Customer's Drive to the Server requires that the data first be transported using the AGBRIDGE™ Mobile App ("**App**") to the Customer's mobile device, where the data is stored until it is transported to the Server via either cellular or Wi-Fi data transmission. Once the data has been successfully transported to the Server, that data is deleted from the Customer's mobile device's mass storage by the App.

Use and Sharing of Customer Data

AGBRIDGE™ Services is a wireless data transport solution designed to transfer a Customer's agriculture data files between the office and field. In the case of transport from the field to the office, all data is transported exactly as it is delivered to the Drive. In the case of transport from the office to the field, all data is transported exactly as it is delivered to the Server via the sync client software or a third party as directed by Customer. Scruggs explicitly warrants that Customer data is not shared by Scruggs with any third party except as directed by Customer in the case of a Linked Account as defined in the Contract; or as required to provide AGBRIDGE™ Services as described in the Contract.

Customer Data Security

Scruggs stores Customer data on secure servers owned and operated by Amazon Web Services. Data files are backed up once per day and backups are stored for 7 days. Amazon Web Service's Service Level Agreement stipulates 99.95% server uptime and 99.999% storage availability.

Access to customer data is controlled via a unique User Name and Customer controlled secure passwords. Customer has full control over data sharing with third parties via the AGBRIDGE™ Portal at www.agbridgemoible.com. While Scruggs strives to ensure no unauthorized access, disclosure, or use of grower data occurs, in that unlikely event, Scruggs will immediately seek to minimize and address the issue, and the affected Customer(s) will be notified by Scruggs or the Customer's Authorized Adviser.
