# L3020G4 Specifications

The New Leader L3020G4 dry box spreader revolutionized the industry when introduced in 2000. What makes this spreader so effective is the patented (#6,517,281) variable rate broadcaster design that spreads material farther, wider and more consistently in changing weather conditions.

## The Proof is in the Pattern

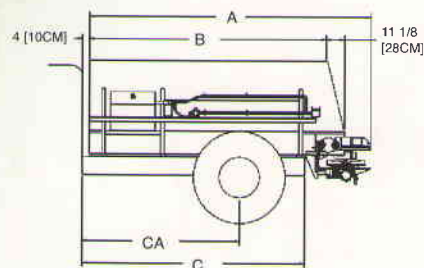

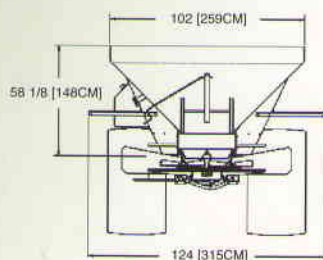

The L3020G4 consistently applies up to 105' spread patterns with fertilizer and up to 60' with ag lime. The belt-over-chain conveyor provides the durability needed for spreading ag lime and uninterrupted delivery needed for other products. Spread more acres per day, apply more product and realize accurate spread patterns.

## Low Maintenance

An easy-to-access conveyor drive shaft and bearings make maintenance and tension adjustment simple. Each unit is available in painted carbon steel, 409 stainless steel or unpainted 304 stainless steel to minimize rust corrosion. Low maintenance and an easy-to-service design make the L3020G4 the most profitable combination spreader on the market today.

## A History of Innovation

New Leader has been setting the standard in custom application equipment since 1939. For additional information, please contact your authorized New Leader dealer or visit our website at [www.new-leader.com](http://www.new-leader.com).
